FOR NEARLY THREE DECADES, Polar Wire Products has exclusively manufactured and offered our premier arctic grade industrial wire: **Arctic Ultraflex Blue®** and **Arctic Superflex Blue®**

Our revolutionary flexible wire combines finely stranded copper construction with a jacket material designed to withstand the abuses of oil, gasoline, sunlight, salt water, acids, and chemicals. Customers have subjected **Arctic Ultraflex Blue®** and **Arctic Superflex Blue®** wire to the harsh environments of Alaska, and proven that even in extreme temperatures to -55°C, this wire works!

We carry wire in a wide range of styles and configurations, and supply solderless terminals, compression and mechanical lugs, heat shrink and other wiring control products and tools.

We search out and source reliable, best quality parts to offer in our store, and use these as components in our cables, jumpers, extension cords, and other Polar Wire branded products as well.

Our web store and catalogs make it easy to order any of the thousands of quality products stocked in our warehouses. In stock items are shipped same day.

Features

- Flame retardant and flexible
- Superior sealing against water and contaminants
- High 3 to 1 shrink ratio allows for coverage of irregularly shaped connectors and components
- Inner adhesive bonds to plastics, rubber, copper, steel, neoprene, and polyethylene
- Shrink temperature: 120°C
- Continuous operating temperature: -55°C to 110°C

Applications

- Industrial, electronic, and automotive OEM approvals
- Environmental sealing and strain relief of connectors and terminals
- Moisture sealing and electrical insulation of simple inline splices
- Abrasion resistance for tubes and pipes
- Repair of damaged wire harnesses

-55°C TO 110°C

Ordering Guidelines

Select a dimension which will shrink snugly over the component to be covered. If recovery is restricted the resultant wall thickness will be less than specified.

Flexo® PET Expandable Braided Sleeving

FLEXO® PET (PT) Braided Sleeving

is used in electronics, automotive, marine and industrial wire harnessing applications where cost efficient and durability are critical. The unique braided construction and wide expandability—up to 150%—allows quick and easy installation over large connectors and long runs. PT can be found in applications ranging from small office/home office to high tech wire and cable harnesses.

PT is braided from 10mm polyethylene terephthalate (PET) monofilament yarns. The material has an operating temperature range of -75°C (-103°F) to 125°C (257°F), and is resistant to chemical degradation, UV radiation, cuts and abrasions.

Flexo F6® Wrappable Split Braided Tube

Flexo F6® has a unique split, semi-rigid braided construction that makes it the ideal solution where ease of installation is of primary importance.

The lateral split allows the tube to open up to accommodate a wide variety of bundling requirements, and the semi-rigid braid simply closes around the entire installation without the need for any additional fasteners.

The 10 mm PET braid is lightweight, quiet and flexible. The 25% edge overlap (at nominal diameter) allows coverage around inline plugs, connectors and splices. F6 will bend to a tight radius without distorting or splitting open. And, unlike full rigid tubing, F6 will not impair or affect the flexibility of harnesses.

Large 25% edge overlap allows easy installation over splices and inline connectors without exposing wires and cables

Heavy Duty Compression Terminals and Splices

Heavy Duty Compression Terminals

Made from high strength, highly conductive electrolytic copper, **Heavy Duty Code and Flex Compression Lugs and Splices** are extra tough, durable, reliable, and 100% conductive. They crimp in industry standard tooling for lowest applied cost.

Use in high voltage and heavy duty applications: generators, transformers, switch gear, motor controls, power distribution, welding equipment, telecommunications and utilities.

- Easy to read industry standard color code markings indicate size, proper die set, and crimp location
- Heavy duty seamless barrel will not open under stress or conductor pull conditions
- Made from highly conductive wrought copper tubing
- Electro tin plated and burnished to prevent corrosion
- Standard barrel lugs feature inspection hole for verifying strand placement
- Chamfered barrel for easy wire insertion
- Available in standard barrel for limited space applications and long barrel for greater pull out strength and increased conductivity
- UL Listed, CSA Certified and rated to 90°C

Fine strand flexible wire has a slightly larger conductor diameter than code stranded wire. When using **Code Lugs** with 2 AWG and larger **Arctic Ultraflex Blue®** and similar fine strand flexible wire, step up one lug size.

Flex Lugs, sized for the larger conductor diameter of fine strand flexible wire, are available on pages 100-101

16 oz. Trigger Spray 91002
16 oz. Aerosol 90102
6 oz. Aerosol 90101

Gallon 94004

CorrosionX® stops and prevents corrosion and rust. A light spray on power heads, generator sets and engines two or three times a year keeps them looking like new—even in saltwater conditions. CorrosionX® lubricates under heavy loads and high temperatures, and penetrates quickly. Corroded or rusted nuts, bolts or fittings can usually be removed within a few minutes. CorrosionX® is nontoxic, non-carcinogenic, and nonflammable when not in aerosol form. The aerosol propellant is flammable.

Polar Bonding

CorrosionX® has the unique ability to “polar bond” to metal, like a magnet. This helps CorrosionX® creep through microscopic voids and over surface irregularities to penetrate between seized surfaces, where it softens rust and corrosion deposits to free up frozen parts. CorrosionX® not only stops rust and corrosion, it provides exceptional, long-lasting lubrication, better than even Teflon-fortified products.

The bearing on the left was treated with CorrosionX; the one on the right was left untreated. Both were sprayed with seawater every day for two weeks. Note the remarkable difference.

CorrosionX® Heavy Duty forms a dripless, non-hardening, self-healing film that stubbornly resists removal by splash or spray—even full saltwater immersion. It penetrates rust and corrosion, removes moisture, stops electrolysis, then seals.

12 oz. Aerosol 90104
Gallon 96004
5-Gallon 96005

CorrosionX® Aviation, a product of aerospace research and development, is a special blend of inhibitors, lubricants and surface-active agents. Stops and prevents rust and corrosion. Lubricates better than Teflon® products. Penetrates and loosens frozen parts faster than other products designed for that purpose.

16 oz. Trigger Spray 80103
16 oz. Aerosol 80102
Gallon 84004

ReJeX® advanced polymer treatment seals painted surfaces, metal, gel coat, glass and acrylic against bugs, bird droppings, exhaust stains, oil, grease, tar, and other grime. ReJeX® forms a long-lasting barrier that protects vehicle finishes and provides a lustrous shine.

12 oz. 61001
16 oz. 61002
Gallon 61004

MaxWax® is a tough, synthetic wax-based, resilient corrosion inhibitor barrier coating that provides long-term protection for metal surfaces. It forms a smooth, even coating and penetrates to stop rust and corrosion. Will not harden, crack or lose resiliency even in sub-zero temperatures and high heat.

12 oz. 77002

ReelX® is the perfect lubricant for fishing reels. It keeps reels lubricated and corrosion-free for maximum performance. ReelX® is used and recommended by prominent reel manufacturers.

1 oz. 77000

CorrosionX® for Guns cuts through stubborn bore deposits for better cleaning, and decreases fouling, even after hundreds of rounds. Lubricates mechanisms and prevents rust, even in wet weather. Ideal for semiautomatics and automatics.
